Network Administration • Cybersecurity • Digital Forensics • Vulnerability Assessment • Network Analysis

PROFESSIONAL SUMMARY

Final Year Computer Science undergraduate specializing in Network Administration, Security, and Digital Forensics. Proven technical capability in infrastructure optimization, with experience in analyzing high-availability redundancy configurations (HSRP/RSTP) to maximize network resilience. Hands-on laboratory experience managing enterprise threat-profiling, network boundary hardening, and forensic data extraction. Proficient in industry-standard tools including Kali Linux, Wireshark, Metasploit, Autopsy, Cisco Packet Tracer, and Burp Suite. A bilingual, analytical communicator. Seeking a 6-month internship from **20 September 2026 to 19 March 2027** in Cybersecurity, Network Security, or IT Operations.

EDUCATION

Bachelor of Computer Science

Oct 2023 - Present

University Sultan Zainal Abidin (UniSZA)

- Major in Computer Network Security with Honors
- CGPA 3.85
- Member of CODEX club.
- Thesis on **"Enhancing Hospital Network Resilience using Redundancy Protocols"** using Cisco Packet Tracer, which improves an existing hospital network design's availability by implementing HSRP for gateway redundancy and RSTP for loop prevention and quicker failover. Successfully proven and documented the difference in resilience before and after the protocols implementation during link and device failure in a technical report using Microsoft Word.

Matriculation

2022 - 2023

Kolej Matrikulasi Perak (KMPk)

- CGPA 3.58

AWARDS AND CERTIFICATIONS

- Achieved **Dean's List** for 5 consecutive semesters (Semester 1–5), UniSZA
- Completed **CCNA: Switching, Routing, and Wireless Essentials (Cisco)** - gained hands-on experience in network configuration, routing protocols, and wireless networking.
- Completed **Introduction to Cybersecurity (Cisco)** - gained knowledge on vulnerabilities, threat detection, and defense.
- Completed **Computer Networking Bootcamp (Forziq)** - focused on practical networking concepts and real-world implementation.
- Completed **Know the OS (Hacker X)** - learned about basic and network-related commands for Kali Linux.
- Completed **Hack the MAC (Hacker X)** - learned about how to perform MAC Spoofing in Windows and Kali and prevention methods.
- Completed **Starts Writing Prompts like A Pro (Google)** - gained knowledge on writing proper prompts to AI to get desirable and accurate results.

SKILLS

Technical Skills

- **Network & Malware Security/Analysis:** Utilized Wireshark for packet capture and traffic analysis to identify anomalies and potential threats. Performed network scanning and enumeration using Nmap and Zenmap. Conducted basic penetration testing and vulnerability assessment using Kali Linux, Metasploit, and Burp Suite in controlled lab environments. Examined malware without executing it using VirusTotal, PEview, PEiD, BinText, and Dependency Walker.
- **Digital Forensics & Reverse Engineering:** Performed digital investigations using Autopsy for file system and artifact analysis. Used HxD for hex-level data inspection and MxToolbox Header Analyser for analyzing a phishing email's header.
- **Network Engineering & Simulation:** Designed and simulated network topologies using Cisco Packet Tracer and GNS3. Configured routing protocols and implemented network segmentation and wireless configurations in lab-based scenarios.
- **Hardware & IoT:** Developed basic IoT systems using Arduino, including sensor-based data collection and transmission concepts.

Soft Skills

- **Critical Thinking & Problem-Solving:** Performed threat profiling, and network diagnostics. Experienced in methodically dissecting system anomalies and isolating indicators of compromise during laboratory forensic investigations.
- **Collaborative Teamwork:** Proven ability to collaborate effectively within technical and cross-functional teams to align infrastructure designs with overall security policies.
- **Instructional Leadership:** Ability to simplify complex tasks for training purposes.
- **Technical & Analytical Communication:** Adept at translating complex network configurations, vulnerability assessments, and forensic findings into clear, structured documentation. Demonstrated this by authoring a comprehensive technical blueprint detailing hospital network resilience and failure simulations.

Tools

- **Simulation & Design:** Cisco Packet Tracer, GNS3.
- **Analysis & Diagnostics:** Wireshark (Packet Analysis), Nmap/Zenmap (Scanning).
- **Security & Forensics:** Kali Linux, Metasploit, Autopsy, PEview, PEiD, BinText, Dependency Walker, HxD.
- **Documentation:** Microsoft Word (Technical Reports), PowerPoint (Proposals and Projects), Excel (Data Organization)

PROJECTS

- **Network Traffic Analysis & Vulnerability Assessment | Wireshark, FTP, HTTP:** Inspect protocol layers, identify network security vulnerabilities, extracted plaintext credentials from unencrypted FTP and HTTP traffic, evaluate and demonstrate the weaknesses of HTTP Basic Authentication.
- **Static Malware Analysis | PEiD, Dependency Walker, PEview, BinText:** Conducted safe, non-executable static analysis on malware samples to examine PE headers, imported DLLs, embedded strings, and structural indicators of compromise (IoCs).
- **Digital Forensics & Disk Analysis | Autopsy, BCText Encoder:** Conducted comprehensive disk analysis and successfully recovered deleted data from compromised systems using Autopsy.
- **Web Application Penetration Testing | Burp Suite, Kali Linux, JWT Debugger:** Executed comprehensive security assessments on the OWASP Juice Shop web application to identify vulnerabilities including SQL Injection and XSS.
- **IoT Smart Hand Washing System | ESP8266, Arduino IDE, Blynk Dashboard:** Designed Blynk dashboard and programmed a smart, sensor-based hygiene system that detects hand presence to trigger a 20-second countdown and buzzer.
